
EXPERIMENT 4

Reports Creation in Zoho Creator

1. Aim

To study how reports are created in Zoho Creator and to build a set of List, Kanban, Calendar and Summary reports, with filter criteria, sorting and grouping, for the Library Book Management System so that stored form data can be viewed, analysed and exported in a meaningful way.

2. Introduction

In Zoho Creator, a form is used to collect data and a report is used to display that data. Every record submitted through a form is stored in the application, and a report presents those records to the user in a chosen layout. Reports can show all records or only a filtered subset, and users can search, sort, group, edit, delete and export records directly from the report view.

2.1 Types of Reports

Report Type	Purpose
List Report	Displays records as rows and columns in a simple, editable table. It is the default report for a form.
Grid Report	Displays records as a spreadsheet-like grid with fixed columns, suited to quick scanning of data.
Kanban Report	Shows records as cards arranged in columns based on a field value such as status.
Calendar Report	Plots records on a calendar according to a date field, for example due dates.
Timeline Report	Arranges records chronologically along a timeline.
Map Report	Shows records on a map using address or location fields.
Summary Report	Groups records and shows aggregated values such as counts and totals.

3. Objectives of the Study

- To understand the role of reports in a Zoho Creator application.
- To create List reports from existing forms and choose which fields are displayed.
- To apply filter criteria so that a report shows only the required records.
- To use sorting and grouping to organise report data.
- To create Kanban, Calendar and Summary reports for different viewing needs.
- To test the reports with sample data and export report output.

4. Application Selected: Student Management System

The Student Management System is used for this experiment. Its Student Profile form stores the Student Name, Register Number, Department, Email, Phone Number, Date of Birth, Gender, Admission Date, Academic Status (Active or On Leave), Emergency Contact, Emergency Phone and Address of each student. The application also contains the Enrolment Log, Academic Records

and Department Information sections. Reports are created on the Student Profile form to display this data in different layouts.

5. Procedure

1. Log in to Zoho Creator and open the Student Management System in edit mode.
2. Check that the Student Profile form contains sample student records.
3. Add a new Report component and select the Student Profile form as the source.
4. Create the List, Kanban, Calendar and Summary reports.
5. Save the application and open each report to check the output.
6. Take screenshots of the reports.

6. Reports Created

Report Name	Type	Description
All_Student_Profiles	List	No filter
Active_Students	List	Academic Status = Active
Student_Status_Board	Kanban	Grouped by Academic Status
Birthday_Calendar	Calendar	Date of Birth
Students_By_Department	Summary	Grouped by Department

	Student Name	Register Number	Department	Email	Phone Number
1	Eva Taylor	STU2026005	Chemistry	eva.t@university.edu	+17177456376
2	David Lee	STU2026004	Physics	david.l@university.edu	+19295524643
3	Carol Martinez	STU2026003	Biology	carol.m@university.edu	+18109656637
4	Bob Williams	STU2026002	Mechanical Engineering	bob.w@university.edu	+19547449614
5	Alice Johnson	STU2026001	Computer Science	alice.j@university.edu	+18722934705

8. Advantages

- Data from one form can be presented in many ways without repeating it.
- Filter criteria show only the records that matter to a particular user.
- Sorting, grouping and searching make large record sets easy to manage.
- Kanban, Calendar and Summary reports give visual insight beyond a plain table.
- Reports can be edited, exported and shared with little or no coding.

9. Limitations

- Incorrect criteria or field selection produces misleading reports.
- Some report types and options depend on the Zoho Creator plan in use.
- Complex calculations or cross-form summaries may need Deluge scripting or Pages.
- Very large data sets can make report loading slower.

10. Result

The experiment was successfully completed. Reports for the Student Management System were created in Zoho Creator, including List reports with filter criteria, a Kanban report, a Calendar report and a Summary report. The reports were tested with sample records and produced the expected output.

11. Conclusion

Reports are the presentation layer of a Zoho Creator application. By combining report types with criteria, sorting and grouping, a single set of forms can serve many different information needs. The Student Management example shows how available books, issued books and overdue returns can be tracked easily once suitable reports are in place.
